

PIR Pipe Sections

Product information sheet

**EIC-03 · Thermal Insulation**

PIR Pipe Sections

Pre-formed polyisocyanurate foam sections for high-temperature industrial piping.

Material: Polyisocyanurate foam (PIR)

Primary use: High-temperature industrial piping

Product overview

PIR pipe sections are pre-formed polyisocyanurate foam insulation for industrial pipework. PIR is a rigid closed-cell foam related to polyurethane and is commonly specified for industrial piping that runs at higher service temperatures than standard PUF applications, and for cold service lines. Sections are supplied in half-shell form for standard pipe sizes and finished with vapour barrier and cladding.

Applications

- High-temperature industrial piping
- Process piping
- Cold service lines

Key features

- Rigid closed-cell PIR foam
- Pre-formed half-shell sections
- Used for both hot and cold service piping
- Compatible with standard cladding systems

Available options / specifications

Contact EIC for available specifications. Share your size, thickness and quantity and EIC will confirm the options available for PIR Pipe Sections.
