

PUF Pipe Sections

Product information sheet

**EIC-01 · Thermal Insulation**

PUF Pipe Sections

Pre-formed rigid polyurethane foam sections for chilled, hot water and process piping.

Material: Polyurethane foam (PUF)

Primary use: Chilled/hot water and process piping

Product overview

PUF pipe sections are pre-formed rigid polyurethane foam insulation supplied in half-shell or full-round form to fit standard pipe sizes. The closed-cell structure of polyurethane foam makes these sections a common choice for chilled water, hot water and process piping where controlling heat gain, heat loss and surface condensation matters. Sections are fitted around the pipe, secured, and typically finished with a vapour barrier and cladding.

Applications

- Chilled water piping
- Hot water piping
- Process piping

Key features

- Pre-formed to fit standard pipe sizes
- Closed-cell rigid foam construction
- Quick to fit and secure on site
- Suitable for use with foil facing and metal cladding

Available options / specifications

Contact EIC for available specifications. Share your size, thickness and quantity and EIC will confirm the options available for PUF Pipe Sections.
